AI PARADOX: Energy, Ethics, and Technology

ITALIAN INSURTECH SUMMIT

ENERGY

The energy consumption of data centers is projected to double from 2022 to 2026, creating an urgent need for sustainable energy sources.

Google has partnered with Kairos Power to construct seven small nuclear reactors, expected to generate 500 megawatts of power by 2035. This initiative aims to provide a reliable and carbon-free energy source for its AI data centers, with the first reactor anticipated to be operational by 2030.

Microsoft has made headlines by agreeing to restart operations at the Three Mile Island nuclear facility, which was previously shut down following a significant accident in 1979. This agreement is part of a broader strategy to secure clean energy for its AI infrastructure.

Amazon has also announced plans to acquire a nuclear-powered data center in Pennsylvania, further illustrating the tech sector's shift towards nuclear energy as a solution for rising electricity demands.

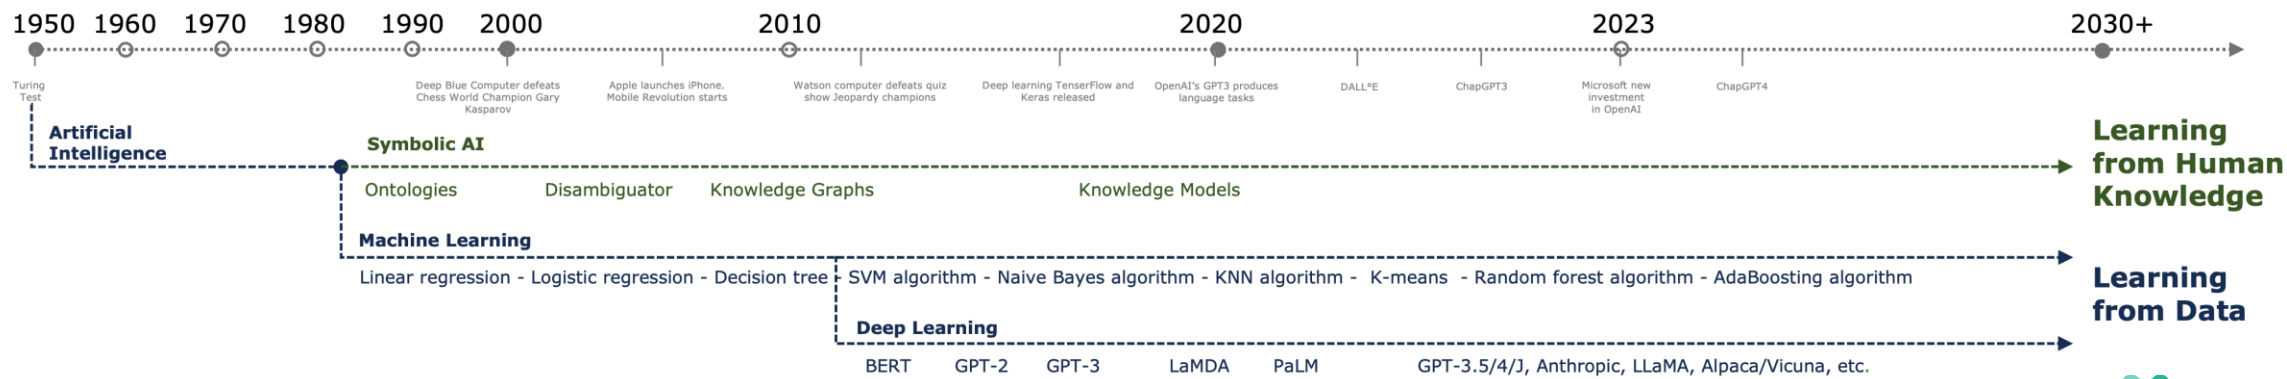

ETHICS

As AI technologies evolve, the need for robust ethical frameworks and regulations becomes increasingly critical.

Humans and AI**

**Job Transformation
Rather Than Elimination**

The Foundations for AI Adoption

Sustainability, Explainability, Trust, and Transparency

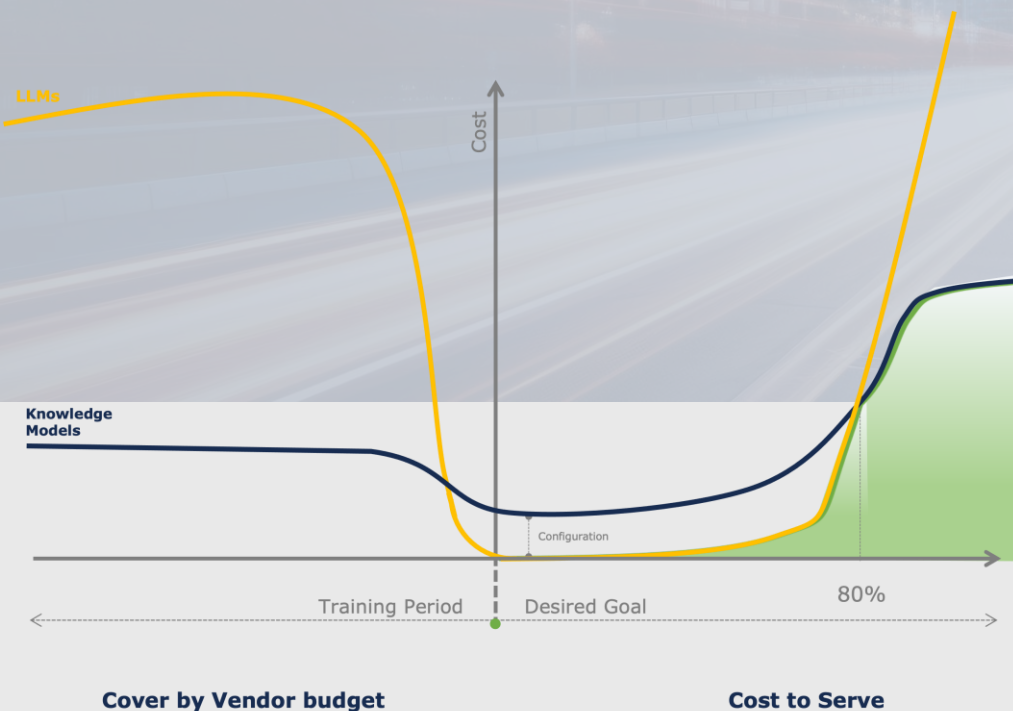

ITALIAN INSURTECH SUMMIT

Sustainability

**Less computing = less energy
= lower carbon footprint.**

To exceed 80% of our targets - *whether qualitative or quantitative* - the cost of using LLMs significantly skyrocket because of the sheer volume of tokens involved.

By blending in symbolic technology, we're able to keep those costs in check, ensuring a more balanced and efficient solution.

Explainability

Explainability encompasses the methodologies and processes that enable human users to understand and trust the outputs generated by machine learning algorithms.

Building Trust

Error Detection and Improvement

Regulatory Compliance

Ethical Considerations

Trust & Transparency

Trust and transparency are essential pillars in the design and implementation of artificial intelligence (AI) systems.

Claim Experience

A REAL USE CASES FROM THE INDUSTRY

Automatically extract & summarise critical content needed to accelerate claims processes (e.g. Workers Compensation) and enable subject matter experts to focus on high-value tasks.

Why Hybrid

Medical Claim Package

Every day, new packages of randomly formatted claims documents arrive as inbound mail, often in arbitrary order:

- o Demand Letter
- o Medical Reports
- o Worker Status Note
- o Diagnostic Study
- o Claim Forms

Manually reviewing large volumes of unstructured data presents challenges to ensuring accuracy, quality, and timely processing.

AI ADOPTION

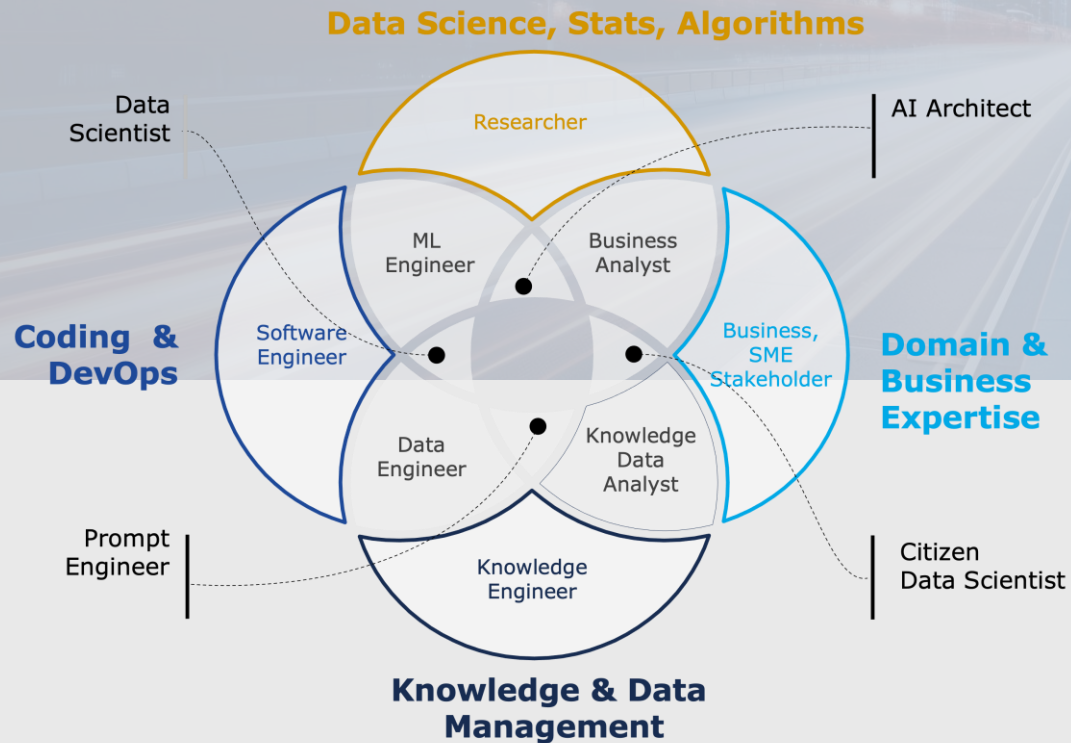

AI adoption is rapidly increasing across industries, driven by advancements in generative technologies and a commitment to leveraging AI for competitive advantage.

The future of work will likely see an evolved landscape where human-AI collaboration enhances productivity and innovation

People

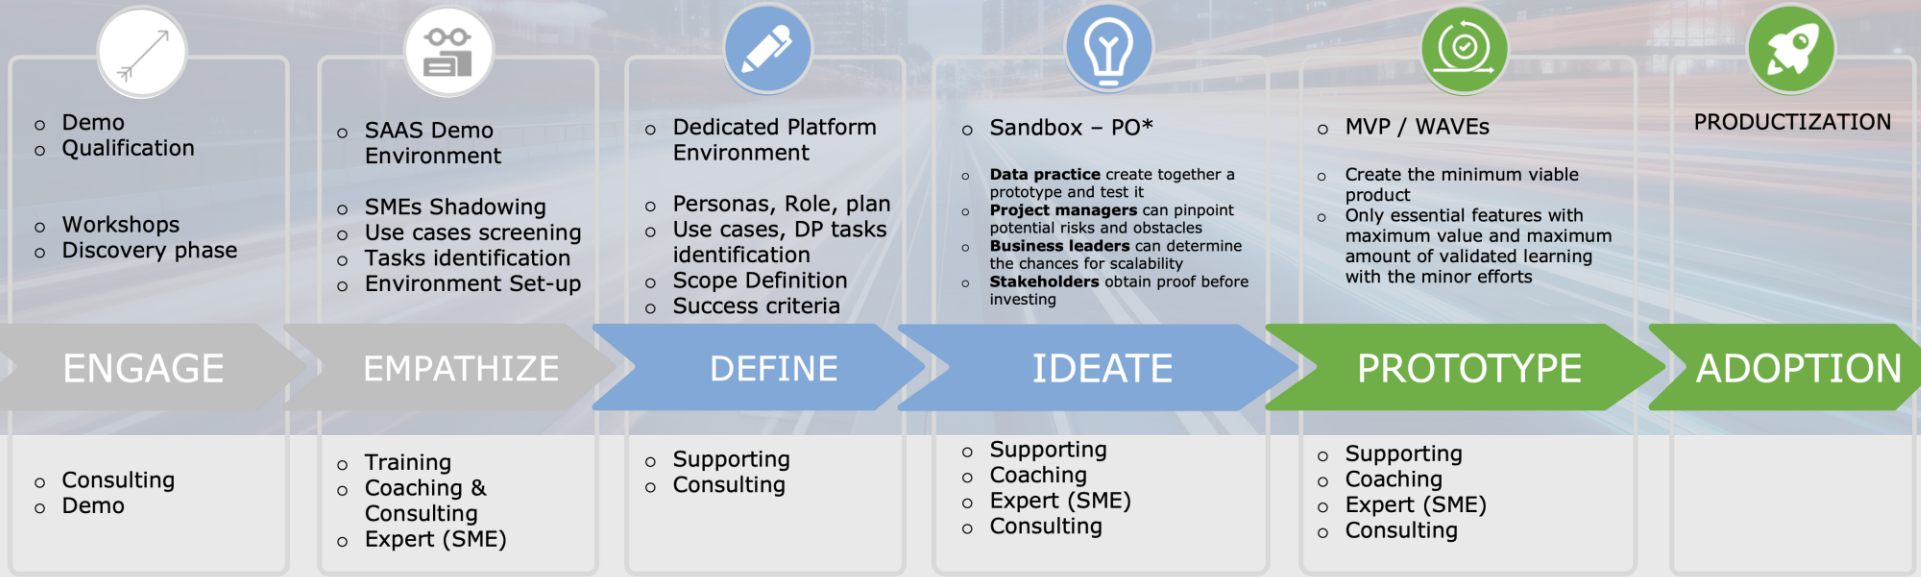

Process

Ai Professional Team

*Empowering AI adoption with a team of 130 experts, mastering everything from data management to data science and domain expertise, all driven by **Never Stop Learning** mindset.*
